ECHO

- *Final Theory / Verdict* :

I believe Dr. Zara ran. She had put all her life's work into this project. And when she learned it was not working, that it had failed. She couldn't cope with it. She ran to hide her shame, and to also avoid her sponsors (allegedly)

- *Evidence and Clues* :

The most important clue to this is the graduate researchers statement. He reported a problem two days before. Something that was ignored.He is proven by module 3. While explaining that both the lights were the same colour. There is no proof it was due to them being linked across space. Infact. The circuit proved that it was because it was fixed beforehand. They aren't connected and hence can't exchange messages.

This leads us to believe that Dr.zara mahmud was wrong. A message could not be sent faster than light with this setup.

But. then why would she write the last note?

Another suspect is Sana. Who had equal, if not more excess to the lab. And who could easily delete bilal’s reports

evidence

Fact :

-her own circuits prove her wrong.
-she was the only person other than sana with excess to everything.
-But she wouldn't leave the note
-Why did she write “echo”?

CLAIM :

-Dr.zara ran to hide her shame.
-her experiment failed.
-the lab AI withheld information, on her orders.
-sana deleted the files.
-sana tampered with the ai and the evidence

INFERENCE :

There was no murder. The Doctor left of her own accords.
or perhaps it was the sana who tampered and made it look like that.

- Experiments and Results
Module 5:
Proves the evidence was tempered with. As while an output can change if its observed. But that change is predictable and should be reversible. Unless it was tempered with, there was no reason we couldnt put it together.

Bilal’s record was deleted. Only sana could do it.

On the other hand

Module 3:
proves that there was a chance Dr.zara was wrong. That the lights were correlated but werent the cause of the agreement.
